

01 / EXPERIENCE

Software engineer - PayPal

Jul 2025 - present
San Jose, CA

- Design and maintain distributed Spring Boot microservices on GCP for PayPal's global Suspicious Activity Report platform, processing transaction, account, and payment data across encrypted pipelines and authenticated service boundaries.
- Built a company-wide Claude Code test-data CLI that provisions custom accounts, bank accounts, cards, and identity attributes in minutes instead of relying on cross-team manual setup.
- Developed an org-wide agent harness connecting Claude Code and Desktop to protected MCP services; diagnose production incidents with Datadog, Splunk, Oracle SQL, and structured logs.

Undergraduate researcher - 5G systems - University of Connecticut

Apr - Sep 2024
Remote

- Benchmarked throughput and latency across four open-air interfaces on Linux; scripted traffic generation, node simulation, and log analysis in Python and shell.
- Implemented gNodeB-to-UE tunneling and built a C-based real-time latency and throughput visualization with srsGUI.

Full stack software engineer intern - Forms+Surfaces

Jun - Aug 2024
Pittsburgh, PA

- Shipped a React and Flask application translating natural-language questions into SQL for a Made2Manage ERP database, cutting data-retrieval time by 40%.
- Automated SolidWorks and PyFEM design validation, accelerating production timelines by 50% and avoiding about \$10,000 in annual prototyping costs.

AI development engineer intern - Propel Flow

Feb - Apr 2024
Remote

- Deployed Python and TensorFlow inference services on AWS EC2 and Lambda, delivering an estimated \$40,000 in annual client savings.
- Tuned GPT-4 financial recommendation pipelines and improved MongoDB retrieval through PyMongo indexing.

02 / PROJECT

Full stack engineer - OneStopShopHousing.AI

Sep 2024 - May 2025
Personal project

- Built scrapers that normalized housing listings into SQLite and an OpenAI-backed natural-language-to-SQL layer; shipped authentication, favorites, comparisons, and commute-time visualization in React and Node.js/Express.

03 / EDUCATION

Georgia Institute of Technology

M.S. Computer Science - machine learning specialization

Started Aug 2026 / expected

2028

OMSCS while working full time

University of Connecticut

B.S. Computer Science - GPA 3.76

May 2025

Honors Scholar and Laureate

04 / TECHNICAL REGISTER

Languages	Python, Java, C/C++, SQL, JavaScript, Bash
Cloud + backend	GCP, AWS, Kubernetes, Docker, Spring Boot, Flask, Node.js/Express, REST microservices
Observe + test	Datadog, Splunk, JUnit, WireMock, structured logging, Git, CI/CD
Data + ML	Oracle SQL, MongoDB, DynamoDB, SQLite, TensorFlow, OpenAI API, MCP servers, Claude Code
